[Article in Polish]

Kłoszewska J.**Author information****Abstract**

Based on a literature review, the application of Acetylcholinesterase inhibitors, IACHE (**donepezil**, rivastigmine, galantamine) in the treatment of various illnesses which have cholinergic system disability and dementia in their course--(dementia with Lewy bodies, vascular dementia, Parkinson's disease, Multiple Sclerosis, Down Syndrome), delirium symptoms (e.g. Korsakoff psychosis), hyperkinesia, attention and **memory disorders**--is presented. **Promising results in the treatment of late dyskinesias, in schizophrenia with impaired cognitive function, as well as in the additional treatment of various psychotic states are noted.** It should be stressed that in Poland, the IACHE have been approved only in the treatment of slight to moderate dementia in the course of Alzheimer's disease.
